Shaping the Future of **VISION CARE**

The Legacy of Dayal Eye Centre

About Us.

Introduction

Caring, Correcting & Curing eye conditions since two decades!

Dayal Eye Centre is a pioneer in ophthalmology with the motto, “you and your eyes are our top priority”. With a team of experienced surgeons and specialists, we offer the best care and optimum treatment. With contemporary world class technology and experience of over **125,000** surgeries, we ensure best treatment at an affordable cost. Dayal Eye Centre is **NABH** accredited facility, treating patients with highest quality standards.

MISSION

To contribute to the advancement of a healthy society with a sustainable quality approach and to provide long-term solutions in health care at an economic level in compliance with medical ethics.

VISION

To emerge as a centre of excellence in the region for quality eye care services at an affordable cost.

Say Goodbye to Cataract Embrace a life of Clarity!

Shorter Duration

Less Recovery Time

Safest Procedure

No Stitches Required

Cataract Surgery

Most cataracts occur when the tissue that makes up the eye's lens changes due to age or trauma. Vision becomes hazy or obscured as the proteins and fibres of the lens begin to deteriorate.

Treatment

Phacoemulsification: The most popular cataract treatment. A small incision is made, the cloudy lens is broken with laser or ultrasound, and replaced with a plastic lens.

Extracapsular Surgery: A larger incision is used to remove the lens in one piece, followed by inserting an artificial lens.

The Only Eye Hospital in Gurgaon To Have Best of Both Worlds

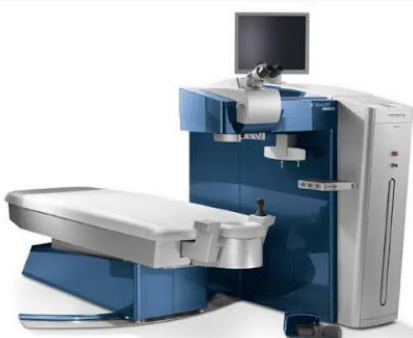

Zeiss Visumax SMILE

- **Minimally Invasive:** Flapless procedure with a small lenticule, lowering risks of dry eyes, inflammation, and infection.
- **Comfort:** Painless surgery with only gentle pressure felt by the patient.
- **Quick Recovery:** Faster recovery than LASIK; patients typically return to work within 5 days.
- **Precision:** High accuracy and gentleness with Zeiss Visumax SMILE's femtosecond technology.
- **Stability:** Preserves corneal integrity better than LASIK, offering greater biomechanical stability.

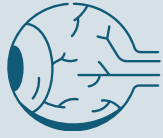

Alcon Wavelight EX500 Contoura

- **High Precision:** Topography-guided technology creates a personalized eye map for tailored treatment.
- **Faster Treatment:** 500Hz pulse speed ensures quick ablation, minimizing complications and enhancing comfort.
- **Eye Tracking:** Advanced system adjusts to eye movements during surgery for precise results.
- **Improved Night Vision:** Reduces glare and halos, enhancing night vision quality.
- **Outstanding Results:** EX500 often delivers better than 20/20 vision, surpassing traditional correction standards.

Other scope of services

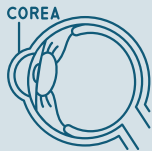

RETINA TREATMENT

Retinal disorder treatments include **Anti-VEGF** injections to block abnormal blood vessels, **vitrectomy** to remove vitreous gel, **laser surgery** to seal or destroy abnormal vessels, **cryotherapy** to freeze retinal tears, and **pneumatic retinopexy** to reattach a detached retina.

OCULOPLASTICS

Cosmetic procedures include **blepharoplasty**, **Botox**, **facelifts**, and lifts for eyelids, brows, and midface. Medical surgeries address **ptosis**, **entropion/ectropion**, **tumour removal**, **tear duct surgery**, **eye removal**, and **orbital reconstruction** for conditions like **Grave's disease**.

CORNEA TREATMENT

Corneal conditions like ulcers, keratitis, dystrophies, and keratoconus affect the cornea, leading to potential vision loss and requiring various treatments.

GLAUCOMA TREATMENT

Glaucoma treatments include eyedrops, oral medications, laser surgery, trabeculectomy, and shunt surgery. Eyedrops lower fluid production or improve drainage, while laser surgery reduces pressure to prevent optic nerve damage. Trabeculectomy creates a drainage hole, and shunt surgery uses a device to drain excess fluid.
